

EXFOLIATION WITH LACTOBIONIC ACID

Treatment procedure:

STEP 1	Remove make-up with Lactobionic Micellar Gel.
STEP 2	Tone the skin with Lactobionic Toner.
STEP 3	Apply Lactobionic Sensi Peel onto the face, neck, neckline and around the eyes with a brush. Massage gently. Leave for about 10-15 minutes. Remove peel with a damp compress and tone with Lactobionic Toner.
STEP 4	Apply C-Fusion Glow Shot.
STEP 5	Optionally, apply Rejuvenating Algae Mask to enhance the treatment.
STEP 6	At the end apply Lactobionic 10% & Vit A + C onto face.

Treatment modifications:

STEP 3	To increase the penetration of lactobionic acid for less sensitive skins, pre-exfoliation with the selected ARKANA peeling or cavitation peeling / microdermabrasion can be performed.
STEP 5	Instead of an algae mask, you can put on a sheet mask, recommended Snow Fungus Mask.
